

ARKOM POS

Setup guide — install the till, connect the printer and scanner, and make your first sale. About 20 minutes. The app runs on the shop computer and works without internet.

1 Install the app

Double-click **Arkomp POS Setup 0.9.0.exe**. No administrator password is needed.

Windows may show a blue “Windows protected your PC” screen. Click **More info**, then **Run anyway**. This appears because the installer is not yet digitally signed; it is safe.

2 Enter your shop details (first launch only)

The first time the app opens, it asks for your shop information. These details print on every customer ticket, so type them exactly as they should appear. The screen is in Spanish:

Nombre legal	Registered business name
NIF	Tax identification number
Dirección	Shop address as it should print on the ticket
Pie de ticket	Footer line, e.g. a thank-you or opening hours
Prefijo de serie	Ticket number prefix — leave as suggested (e.g. T1-)
Datos de demostración	Choose Empezar vacío (start empty) for real trading. Demo products are only for practice and can be removed later in Settings.

Once saved, the main screen opens. The app is now yours — these details can be changed later in **Ajustes** (Settings).

3 Install the printer driver

Before connecting the printer, install the Windows driver for the **Citizen CT-S310S** from Citizen's official download page:

www.citizen-systems.com/us/support/drivers-and-tools

On that page choose: category **POS** — printer **CT-S310** — operating system **Windows 11** (or your Windows version), then download the Windows driver. If the CT-S310 is not in the printer list, select category **Other**: Citizen files discontinued models there.

Run the driver installer and follow its steps. When it finishes, connect the printer to the computer with the USB cable, load the paper roll and switch it on.

4 Connect the barcode scanner

Plug the scanner into a USB port. No driver or setup is needed — Windows recognises it as a keyboard.

To check it: open Notepad and scan any product barcode. The numbers should appear and the cursor jump to a new line. If they do, the scanner will work everywhere in Arkom POS.

5 Select the printer in Settings

In the app, open **11 · Ajustes** (Settings) from the left menu:

- Choose the **Citizen CT-S310S** from the printer list.
- Set paper width to **80 mm** (or 58 mm if you use narrow rolls).
- Click **Imprimir prueba** (test print).

A test ticket should print and cut. If a cash drawer is connected to the printer, it will also open. If nothing prints, check the cable, the paper and that the driver installed correctly.

6 Make a test sale

Open **01 · Venta** (Sale). Scan a product barcode, or tap any product in the grid — it appears on the ticket at the right. Choose a payment method, then press **Cobrar** (Charge).

The ticket prints automatically and receives its number (for example T1-000001). Press **Imprimir ticket** to print it again — copies are marked COPIA.

If the printer is unavailable, the sale still completes and the ticket can be saved as a PDF instead. A sale is never lost because of a printer problem.

The three screens

01 · Venta	Sale — Sell. Scan or tap products, sell phones by choosing their IMEI, take cash, card, Bizum or transfer on one ticket, park a ticket to serve another customer, print and reprint.
02 · Catálogo	Catalog — Your products. Add and edit items with their price, cost, tax and group. Items missing information are flagged so nothing is sold with a wrong price.
03 · Inventario	Inventory — Your stock. Live quantities and their value, low-stock warnings, and the full history of every item. Use + Entrada de stock to receive deliveries — for phones, scan one IMEI per unit.

Good to know

- The app works with no internet. Nothing stops if the connection drops.
- Your data is stored on this computer and backed up automatically every night and when the app closes. In Settings you can add a second backup location, such as a USB stick.
- Switch the interface between Spanish and English with the **ES · EN** button in the top bar. Customer tickets always print in Spanish.
- This is version 0.9.0. It covers selling, catalog and stock. Staff logins, refunds, repairs and used-device buying arrive in the next phases.
